

PSUPS20A12CR

v.1.3

PSUPS 13,8V/12V/20A/2x17Ah

**Buffer power supply for up to 16 HD cameras and DVR
with recorder space**

EN

Edition: 7 from 17.02.2020

Supersedes the edition: 6 from 02.07.2018

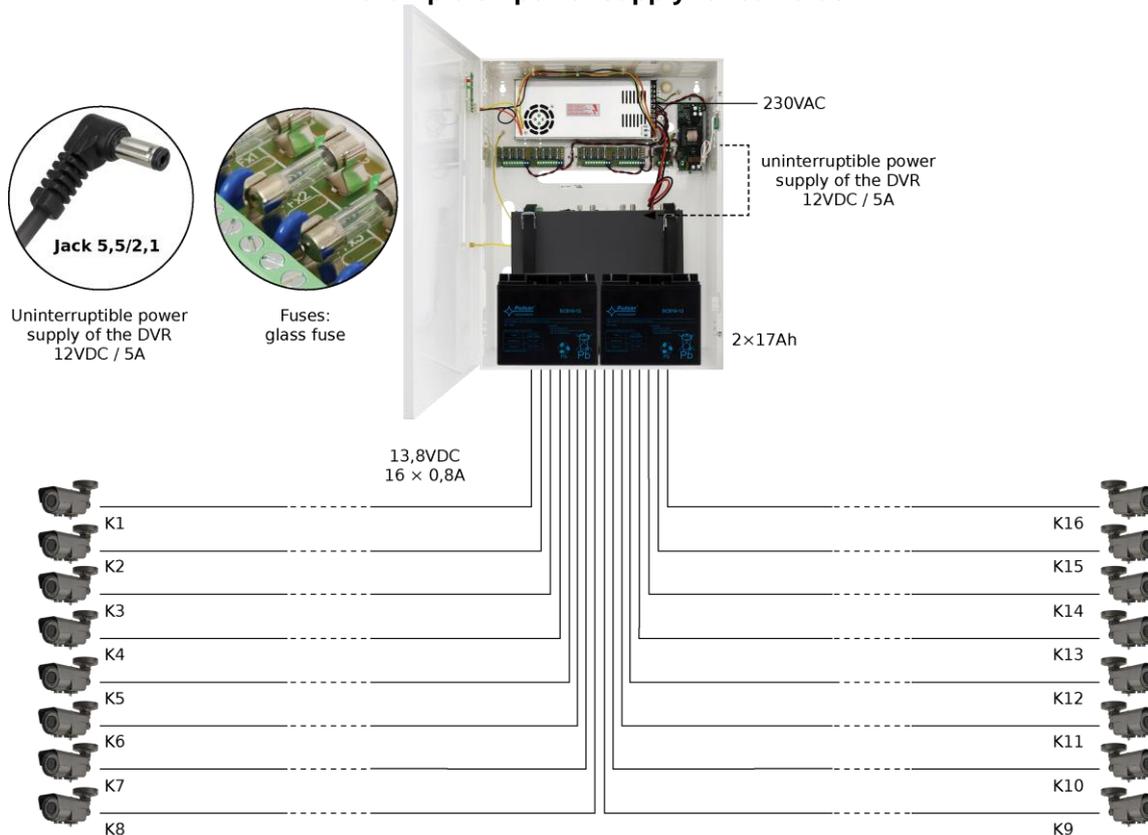

GREEN POWER CCTV

Features:

- DC 13,8 V uninterruptible power supply of HD cameras
- DC 12 V uninterruptible power supply of the recorder
- fitting battery 2x17Ah/12 V
- recorder space
- wide range of mains supply ~200-240 V
- built-in power factor correction system (PFC)
- high efficiency 85%
- 16 outputs protected by 1A glass fuses for powering cameras
- 12V/5A output dedicated to supply the recorder
- battery charge and maintenance control
- deep discharge battery protection (UVP)
- battery charging current 2 A/4 A/8 A jumper selectable (batteries 2x17Ah connect in parallel)
- approximate backup time: 2h
- battery output protection against short circuit and reverse polarity connection
- LED indication
- the enclosure construction is compliant with the requirements of the General Data Protection Regulation GDPR (the possibility of installing two locks with different codes)
- protections:
 - SCP short-circuit protection
 - OLP overload protection
 - OVP over voltage protection
 - OHP overheat protection
 - surge protection
 - against sabotage
- warranty – 2 years from the production date

An example of power supply for cameras.

CONTENTS:

1. Technical description.

- 1.1. General description
- 1.2. Block diagram
- 1.3. Description of PSU components and connectors
- 1.4. Specifications

2. Installation.

- 2.1. Requirements
- 2.2. Installation procedure

3. Operating status indication.

4. Operation and use.

- 4.1. Overload or short circuit of the PSU output (SCP activation)
- 4.2. Overload or short circuit of the recorder's module or CCTV camera module
- 4.3. Battery-assisted operation
- 4.4. Parallel connection of batteries
- 4.5. Maintenance

1. Technical description.

1.1. General description.

A buffer PSU is intended for an uninterrupted supply to CCTV system devices requiring stabilized voltage of **12 V DC (+/-15%)**. The PSU has two circuits: first **1x5 A/12 V DC** for supplying the recorder and **16x0,8 A/13,8 V DC** for both cameras. Current efficiency of the PSU amounts to:

1. Output current **16x0,8 A + 5 A recorder + 2 A battery charging***
 2. Output current **16x0,7 A + 5 A recorder + 4 A battery charging***
 3. Output current **16x0,4 A + 5 A recorder + 8 A battery charging***
- Total current of the receivers + battery 20 A max.**

In case of 230 V mains power loss, a battery back-up is activated immediately.

The approximate backup time is given assuming that all output ports are used (using typical devices and 34Ah batteries). The electricity consumption for own needs and the energy efficiency of the power intake track were taken into account. The exact description of how to perform the calculations can be found at: ["Approximate backup time - assumptions for calculations"](#).

The power supply unit is placed in a metal enclosure (color RAL 9003) with space for 2x17Ah/12 V batteries and a recorder. **The enclosure construction is compliant with the requirements of the General Data Protection Regulation GDPR (the possibility of installing two locks with different codes)**. The enclosure is equipped with a micro-switch indicating unwanted opening of the door (faceplate).

1.2. Block diagram (fig.1).

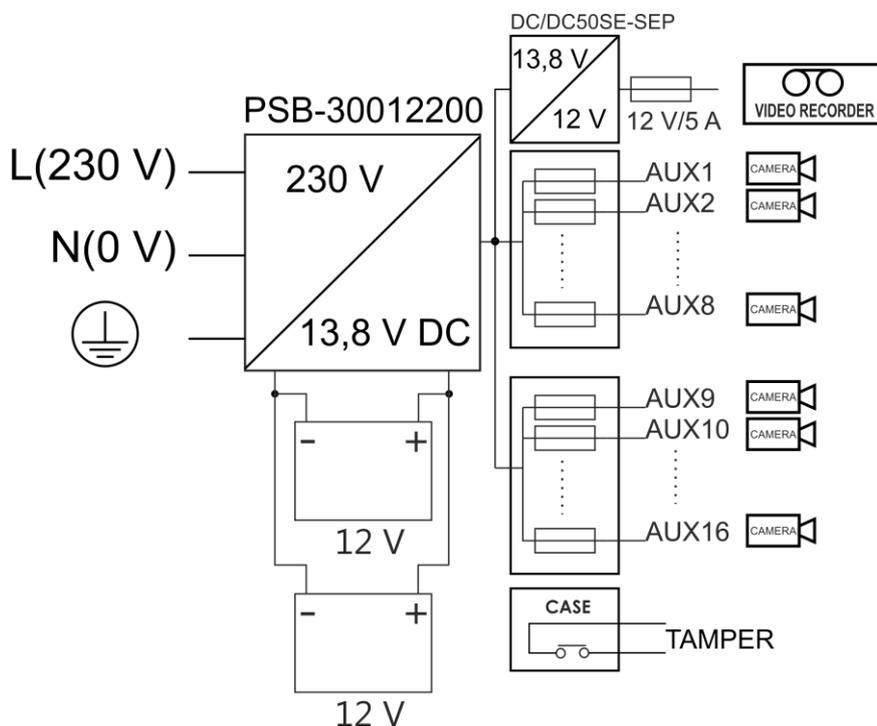

Fig.1. Block diagram of the PSU.

* See chart 1

1.3. Description of PSU components.

Table 1. Description of components and connectors module LB8

Component no. [Fig. 2]	Description
①	F1÷F8 glass fuses
②	L1÷L8 LED voltage indication at the outputs
③	AUX1 ÷ AUX8 independently protected outputs IN1-, IN2- power supply inputs of the fuse module

Table 2. Description of components and connectors

Component no. [Fig. 3]	Description
①	F _{AUX} glass fuses
②	 protection connector
③	AUX – output IN – power supply inputs, output filter

The enclosure contains 2 fuse modules for powering 16 cameras.

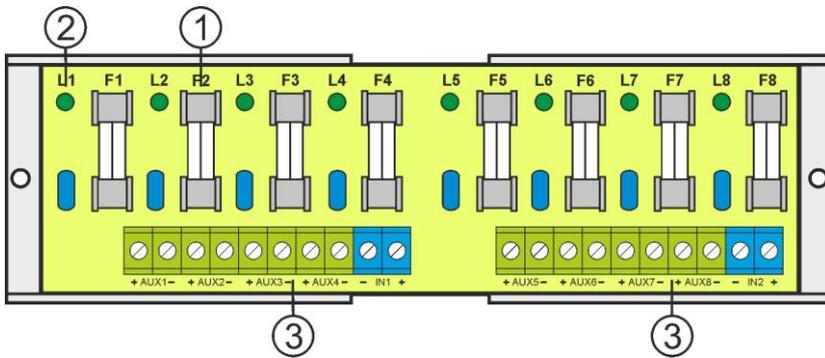

Fig.2. The view of the fuse module LB8.

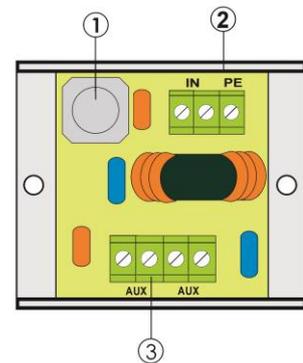

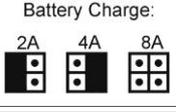

Fig.3. Output filter.

Table 3. Description of the module's components and connectors.

Component no. [Fig. 4]	Description
①	PSU module PSB-30012200
②	Connectors of the PSU: L-N 230 V power connector,  protection connector V+, V- DC supply outputs B+, B- battery output
③	green LED indicates DC power
④	P1 potentiometer, output voltage adjustment
⑤	Battery outputs: red: +, black: -
⑥	TAMPER, contact of tamper protection (NC)
⑦	Battery charging current selection:  Description:  jumper on,  jumper off
⑧	Fuse module LB8
⑨	DC/DC 50SE-SEP converter
⑩	Output filter
⑪	Cable for supplying recorder there is plug DC 2,1/5,5

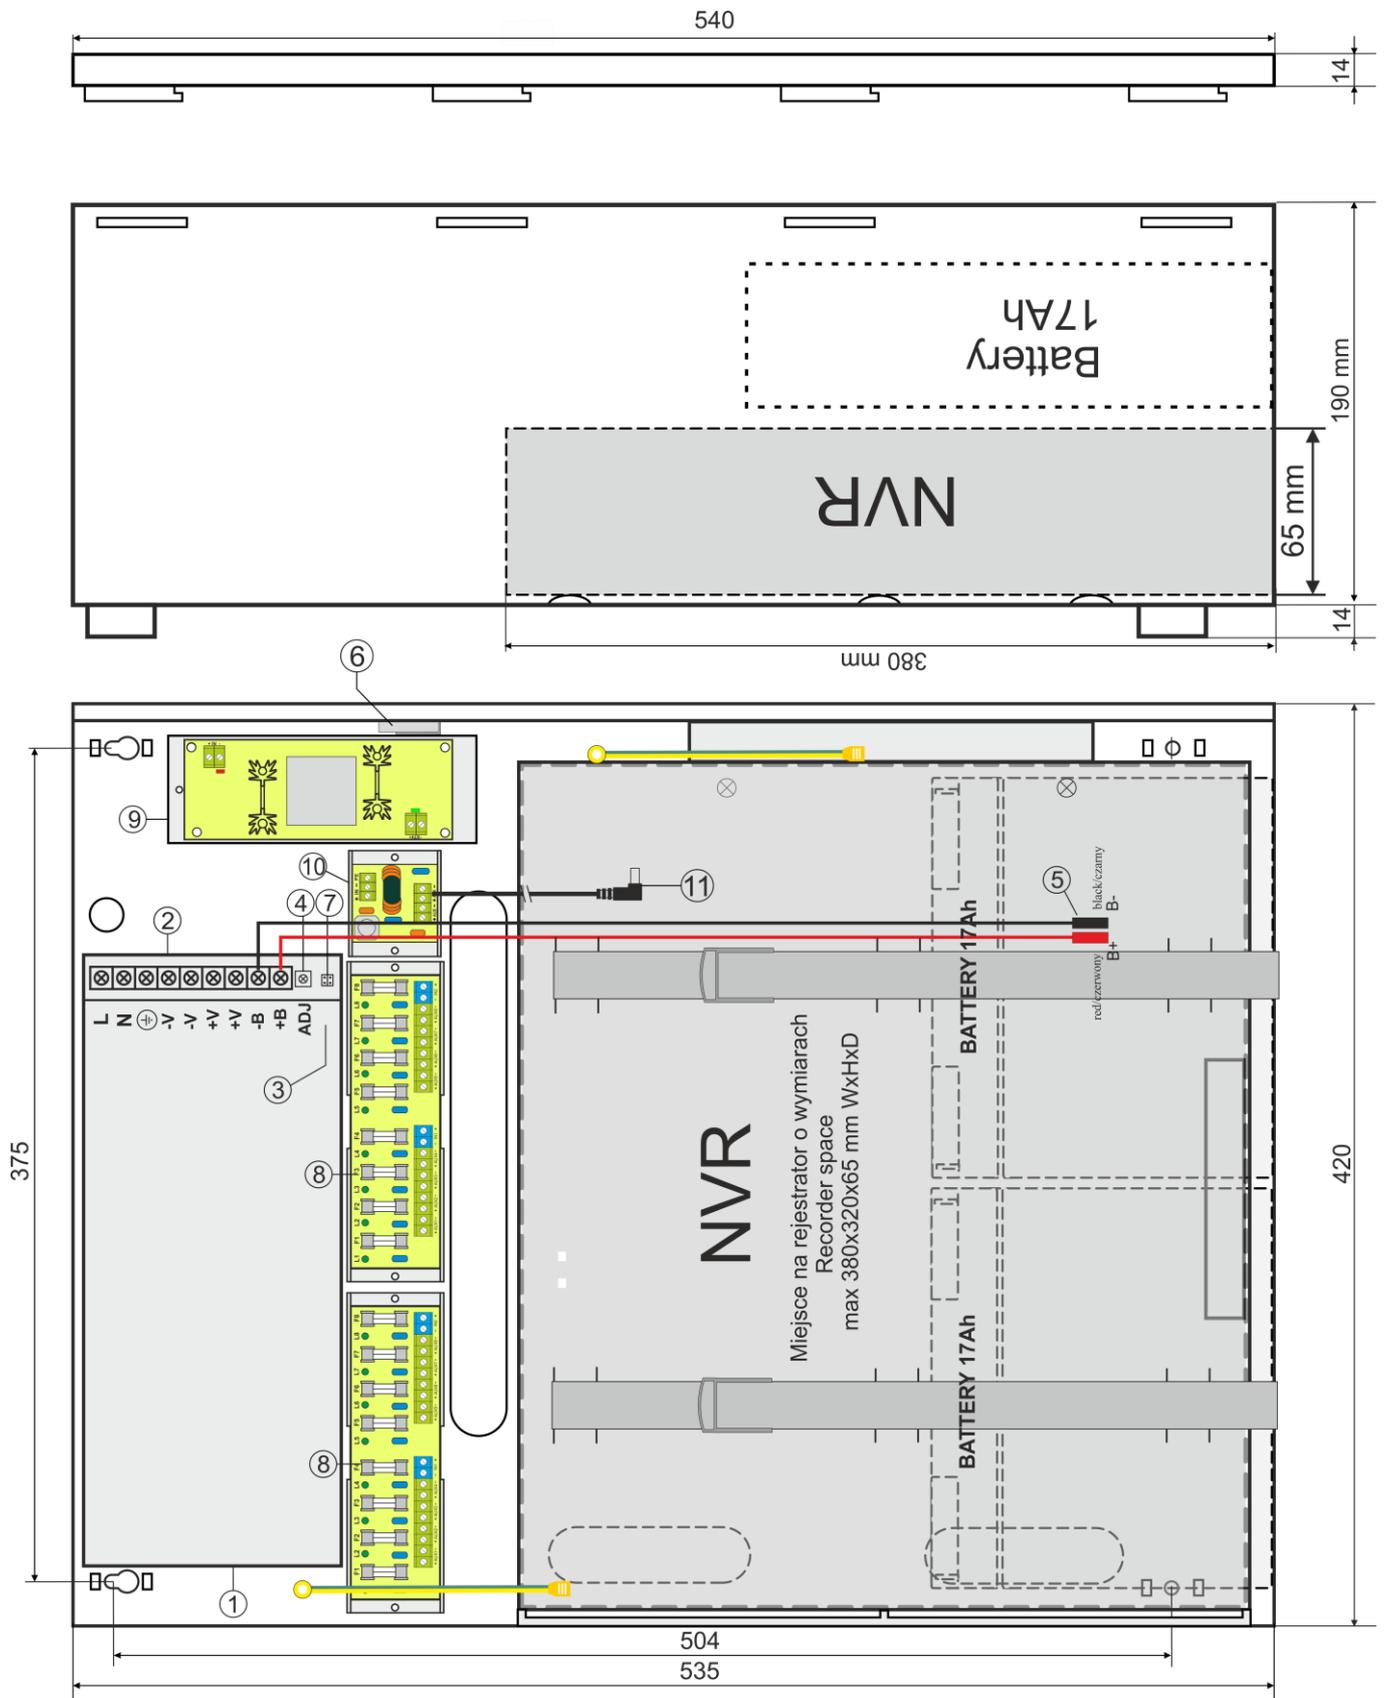

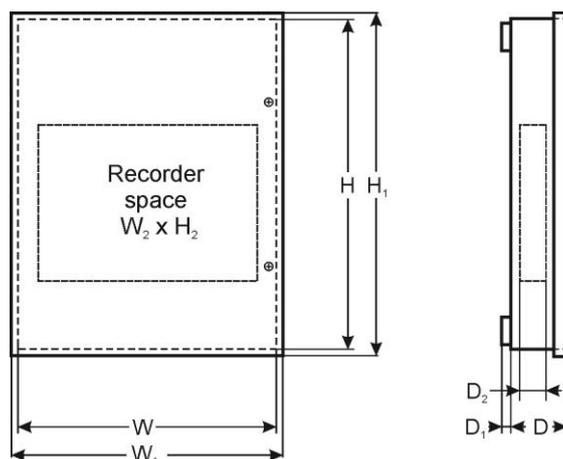

Fig.4. The view of the PSU.

1.4. Specifications:

- electrical specifications (tab.4)
- mechanical specifications (tab.5)
- operation safety (tab.6)
- operating specifications (tab.7)

Table 4. Electrical specifications.

PSU type	A (EPS - External Power Source)
Mains supply	~200-240 V; 50Hz
Current consumption	1,5 A
PSU's power	264 W
Efficiency	85%
Power factor PF	>0,95 @230 V
Output voltage – Fuse base for fuse strips16x	11 V± 13,8 V DC – buffer operation 9,5 V±13,8 V DC – battery-assisted operation
Output voltage – recorder	12V DC maintained regardless of the state of battery charge
Output current $t_{AMB}<30^{\circ}C$	16x0,8 A + 5 A recorder + 2 A battery charging* 16x0,7 A + 5 A recorder + 4 A battery charging* 16x0,4 A + 5 A recorder + 8 A battery charging* Total current of the receivers + battery 20 A* max. * see chart 1
Output current $t_{AMB}=40^{\circ}C$	16x0,4 A + 5 A recorder + 2 A battery charging* Total current of the receivers + battery 14 A* max. * see chart 1
Output voltage adjustment range	12-14 V DC
Ripple voltage	120mV p-p max.
PSU current consumption	0,3 A
Battery charging current (batteries 2x17Ah connect in parallel)	2 A, 4 A,8 A jumper selectable
Approximate backup time	2h
Short-circuit protection SCP	2x STRIP LB8: 16x F 1 A glass fuse, Output filter 1xF 5 A
Overload protection OLP	105% ÷ 150% of the PSU power, automatic recovery
Battery circuit protection SCP and reverse polarity connection	glass fuse 30 A
Surge protection	varistors
Over voltage protection OVP	>16 V (activation requires disconnecting the load or supply for about 20 s.)
Deep discharge protection UVP	$U<9,5 V (\pm 5\%)$ – disconnection of battery terminal
Sabotage protection: - TAMPER output indicating enclosure opening	- micro-switches, NC contacts (enclosure closed), 0,5A@50V DC (max.)
Optical indication: front panel of the PSU - AC OK.; LED indicating the AC power status - DC OK.; LED indicating the DC supply at the PSU output	- red, normal status – on, failure: off - green, normal status – on, failure: off

* See chart 1

Table 5. Mechanical specifications.

Dimensions	W=420, H=535, D+D ₁ =193+14 [+/- 2mm] W ₁ =425, H ₁ =540 [+/- 2mm]
The dimensions of the recorder compartment	W ₂ =380, H ₂ =320, D ₂ =65 [+/- 2mm]
The dimensions of the battery compartment	380 x 340 x 175 mm (WxHxD) max
Fixing	See Fig. 3
Net/gross weight	8,8/9,6 kg
Enclosure	Steel plate DC01 1,0mm, colour RAL 9003
Closing	Cheese head screw x2 (at the front) The possibility of installing two locks with different codes.
Connectors	Mains supply: Φ 0,63-2,50 (AWG 22-10) Outputs for cameras: Φ 0,63-2,50 (AWG 22-10) Recorder outputs: power cord 55cm, terminated with the DC 5,5/2,1 plug Battery outputs: Φ 6/2,5mm ² TAMPER output: wires
Notes	The enclosure does not adjoin the assembly surface so that cables can be led. Forced cooling - built-in fan.

Table 6. Operation safety.

Protection class EN 60950 -1:2007	I (first)
Protection grade EN 60529: 2002 (U)	IP20
Electrical strength of insulation: - between input (network) circuit and output circuits of the PSU - between input circuit and protection circuit - between output circuit and protection circuit	3000 V AC min. 1500 V AC min. 500 V AC min.
Insulation resistance: - between input circuit and output or protection circuit	100M Ω , 500V DC

Table 7. Operating specifications

Environmental class	II
Operating temperature	-10°C...+40°C
Storage temperature	-20°C...+60°C
Relative humidity	20%...90%, without condensation
Vibrations during operation	unacceptable
Impulse waves during operation	unacceptable
Direct insolation	unacceptable
Vibrations and impulse waves during transport	Wg PN-83/T-42106

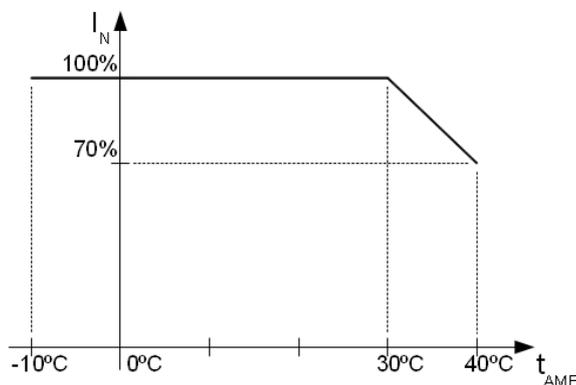

Chart 1. Acceptable output current from the PSU depending on ambient temperature.

2. Installation.

2.1 Requirements.

The buffer PSU is to be mounted by a qualified installer, holding relevant permits and licenses (applicable and required for a given country) for 230 V interference and low-voltage installations. The unit should be mounted in confined spaces, in accordance with the 2nd environmental class, with normal relative humidity (RH=90% maximum, without condensation) and temperature from -10°C to +40°C. The PSU shall work in a vertical position that guarantees sufficient convectional air-flow through ventilating holes of the enclosure.

The power supply load balance should be done before installation:

1. Output current 16x0,8 A + 5 A recorder + 2 A battery charging*
 2. Output current 16x0,7 A + 5 A recorder + 4 A battery charging*
 3. Output current 16x0,4 A + 5 A recorder + 8 A battery charging*
- Total current of the receivers + battery 20 A max.**

As the PSU is designed for a continuous operation and is not equipped with a power-switch, therefore an appropriate overload protection shall be guaranteed in the power supply circuit. Moreover, the user shall be informed about the method of unplugging (most frequently through separating and assigning an appropriate fuse in the fuse-box). The electrical system shall follow valid standards and regulations.

2.2 Installation procedure.

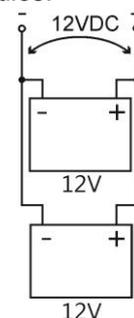

Before installation, cut off the voltage in the 230 V power-supply circuit. To switch power off, use an external switch, in which the distance between the contacts of all poles in the disconnection state is not less than 3mm.

1. Mount the PSU in a selected location and connect the wires.
2. Connect the power cables (~230 V) to L-N terminals of the PSU.

The shock protection circuit shall be performed with a particular care, i.e. the yellow and green wire coat of the power cable shall stick to one side of the terminal - marked with “⊕” symbol on the PSU enclosure. Operation of the PSU without the properly made and fully operational shock protection circuit is UNACCEPTABLE! It can cause a device failure or an electric shock.

3. Connect the ground wire to the terminal marked with the symbol (power supply module connector). Connect the ground wire to the clip marked by the earth symbol (⊕). Use a three-core cable (with a yellow and green ⊕ protection wire) to make the connection. Lead the cables to the appropriate clips through the insulating bushing of the connection board.
4. Mount the recorder in a designated area of the housing.
5. Connect the power supply of the DVR (by default, the device is equipped with a cable terminated with the DC 2.1 / 5.5 plug).
6. Connect the camera cables to the **AUX1...AUX16** connectors of the LB8 modules.
7. Connect the power (~230 V).
8. Check the PSU output voltage:
 - the PSU voltage without load should amount to U=13,8 V DC.
9. Connect the batteries in parallel:
 - battery output (+): BAT+ cable / red,
 - battery output (-): BAT – cable / GND / black.

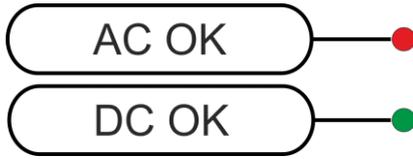

10. Check the PSU operation indicator: green LED (on the power supply module).
11. After installing and checking proper working, the enclosure can be closed.

* See chart 1

3. Operating status indication.

The PSU is equipped with two diodes on the front panel:

RED LED:

- on – The PSU supplied with 230 V voltage
- off – no 230 V mains supply

GREEN LED:

- on – DC voltage at the AUX output
- off - no DC voltage at the AUX output

4. Operation and use.

4.1 Overload or short circuit of the PSU output (SCP activation).

In case of overload, the output voltage is automatically shut off, and so is the LED indicator. The restoration of the voltage takes place immediately once the failure (overload) is over.

4.2 Overload or short circuit of the recorder's module or CCTV camera module.

The modules of the recorder and CCTV cameras are protected against a short circuit by fuses (fuse-elements). In case of fuse replacement, use a replacement of the same parameters, in conformity with specific norms and power balance.

4.3 Battery-assisted operation.

The power supply is equipped with deep discharge battery protection (UVP). If the voltage at the battery terminals drops below 9,5 V during battery-assisted operation, the batteries will be disconnected.

4.4 Parallel connection of batteries.

The power supply has space for two parallel connected batteries. With this connection, the following rules should be observed:

- Connect only new batteries: of the same manufacturer, type and the same capacity
- To minimize the rapid flow of current between the batteries, the batteries should be fully charged before connecting with external charger.
- In the case of low battery, replace always both batteries at the same time.

4.5 Maintenance.

Any and all maintenance operations may be performed following the disconnection of the PSU from the power supply network. The PSU does not require performing any specific maintenance measures. However, in case of dust, clean the interior with compressed air. In case of fuse replacement, use a replacement of the same parameters.

**WEEE MARK**

According to the EU WEE Directive – It is required not to dispose of electric or electronic waste as unsorted municipal waste and to collect such WEEE separatel.

CAUTION! The power supply unit is adapted for cooperation with the sealed lead-acid batteries (SLA). After the operation period they must not be thrown but recycled according to the applicable law
